

What is Organic Lawn Care and Why is it the best choice?

Organic Lawn Care safeguards your lawn with natural fertilizers, weed control and other natural products that do not contain any harmful chemicals or toxic products. By doing this, it will help to improve the quality of your soil and lawn.

How does it work?

Amaizeingly Green controls weed seeds by releasing organic dipeptides into the soil and inhibiting root formation of germinating weeds.

What is wrong with Chemical Lawn Care?

Scientific studies have found several negative health consequences associated with the chemicals found in traditional lawn care products. These chemicals are dangerous to humans especially children and have been linked to cancer and other long-term diseases. In addition, these chemicals do not provide the carbohydrates essential for healthy soil and some are so caustic that they kill soil organisms and inhibit plant growth.

GO GREEN

Bioherbicide for Weed and Crabgrass Management! Reduces crabgrass and dandelion seed germination

Amaizeingly Green Corn Gluten Turf Fertilizer has numerous advantages over customary chemical weed and feed products;

- Will not burn your turf,
- Can be easily applied using any fertilizer spreader,
- Can be applied rain or shine,
- Pets and children can safely use the treated area immediately after it has been applied. No waiting Period required.

Amaizeingly Green is a non-selective organic pre-emergent herbicide and slow release organic nitrogen fertilizer for the control of broadleaf weeds.

Amaizeingly Green is formulated for use in general agriculture as well as organic farms, commercial and residential landscapes, parks, schools and play grounds, golf courses, greenhouses, nurseries, tree farms and other natural areas.

Amaizeingly Green can be used in and around flowers, gardens, perennial plants, annual and perennial bulbs, orchards, fruit and nut trees, vineyards, ornamental trees and shrubs, rose gardens, and virtually any woody or herbaceous plant.

How do you apply it?

Amaizeingly Green can be distributed using a spreader or cultivated directly into the soil. Allow for a short drying period after application and initial irrigation. Amaizeingly Green will inhibit germination and is best applied after vegetable or flower seedlings are established. Apply to established turf in early spring before dandelion and smooth crabgrass seed germination at a rate of 9.7 kg/100 m² (20 lbs. /1000 sq.ft.). Apply again in late Summer or early Fall. Amaizeingly Green cannot be over-applied and causes no known environmental hazard.
