

# ***Amaizeingly Green Fertilizer***

**Thank you** for supporting the Rotary Club of Collingwood South Georgian Bay by buying **AMAIZEINGLY GREEN** through our fund raising campaign. All of the proceeds from this campaign are used for our work locally and around the world. Current active club projects are the Rotary House in Barrie at the RVH Cancer Center, Collingwood G&M Hospital, and variety of children's programs and poverty alleviation in Collingwood. Our International programs include a Back to School project in the Philippines and an orphanage in Kenya.

**You have chosen** to use a natural product for your lawn care. This is a new and environmentally friendlier way to look after your grass. To succeed on that new path you need to 'feed your soil' and it will in turn feed the grass. Fortunately the same product also acts to control your weeds, although in a different way than the 2-4D chemicals you may have used before.

**A complete natural lawn care program** is based on creating a healthy soil environment so the natural soil decomposition process can produce the nutrients the grass needs. **AMAIZEINGLY GREEN** can supply nitrogen and control weeds. It does not supply phosphorus or potassium and if you want to supplement the soil with those, you need to add another product into your seasonal program Building up the organic matter content of the soil over a few years is the key to a healthy thriving lawn that naturally controls weeds.

To order more go to: [www.Rotarycollingwoodsgb.org](http://www.Rotarycollingwoodsgb.org) & note our promotional code **54505**

**The suggested application rate** is one 9 kg. bag/1000 square feet. Putting half of it on in the spring and the rest at the end of August allows **AMAIZEINGLY GREEN** to act as a source of nitrogen (10-0-0) and as a pre-emergent weed control. The nitrogen is slowly released over a period of about 40 days and the weed control is most effective over about 20 days.

If you do not recycle your lawn clippings you should plan to apply twice the above rate.

**The product is totally safe** and there is no need to restrict any activity on your lawn after **AMAIZEINGLY GREEN** is applied. Use a normal spreader to apply. There is no danger of burning your grass.

**Apply to new sod and flower and vegetable gardens** after the plants are established. The slow release nitrogen will feed the plants and the pre-emergent properties will control weed seeds from germinating.

**AMAIZEINGLY GREEN** will not kill weeds that are already established. It only prevents germination of new weeds. After a few years of using the product you will get full control over the weeds. Working without toxic substances takes a bit of patience.

Thank you for supporting a Rotary Fund Raiser and the environment at the same time. Together we can contribute to building a better world.
